Femtech is on track to change the world's perception of women's healthcare and our approach to addressing the needs of billions of women around the globe who are in search of personalized, tech-driven solutions that cater to their unique reproductive, maternal, and overall well-being concerns. As a woman-led industry leader with a quarter-century of experience in the life sciences industry, PQE Group has continued to invest in new and innovative solutions, providing the latest products and technologies that empower women to make informed choices about their health, monitor their wellness journeys, and engage in proactive self-care.

Building on the extraordinary success of our debut Femtech roundtable, **PQE Group** are elated to announce the much-anticipated second Femtech roundtable together with the Federation of Obstetric & Gynecological Societies of India (**FOGSI**). This event will focus on pregnancy and maternity under the theme "**Reshaping and Digitalizing Women's Health Innovations to Implementations.**" Advanced maternal age and poor diet management are among the several factors that can elevate the risk of complications in pregnant women. The situation is even more concerning for women with underlying health conditions, as they are more likely to develop complications during gestation. As Femtech continues to evolve with innovative hardware and software solutions aimed at empowering women to be well-informed and make more data-driven decisions regarding their health, female technology holds the promise of significantly enhancing women's overall health and well-being.

After witnessing the successful integration of telehealth in prenatal care during the COVID-19 pandemic, there is a push within the industry to accelerate a novel 'e-hybrid' prenatal care model. This model aims to individualize care while working in tandem with existing and new female technologies to improve care availability and accessibility. Join our two-section roundtable discussion to learn more about pregnancy, maternity, and Femtech from an industry and medical perspective through insights shared by our lineup of global experts.
